SITUATION SUMMARY

Oroville Dam Auxiliary Spillway Incident

On 02/12/17 at 1603 hours the California State Warning Center (CSWC) received notification from the Department of Water Resources (DWR) automated line that the Oroville Dam was in failure status due to extreme scouring of the auxiliary spillway. Key Points

Overview: A weak weather system will move through California starting today with periods of rain and mountain snow likely. This system does not look very strong and impacts will be minor. A second, follow up, system will move through starting Sunday and will keep much of California cool and moderately unsettled through mid week. Again, impacts will be minor.

Flooding: Creeks, rivers, streams, some mainstream rivers, reservoirs and the entire water system has been significantly stressed over the past 7-8 weeks. It will take some time before waters decrease enough to no longer be of concern. Roads, hillsides, and steep grades all remain vulnerable to settling with rock and mud slides possible.

Key Hazards

Today

- Weak weather system moving through mainly the northern half of California. Valley rain and mountain snow likely with minor impacts.

Sunday-Monday

- Another weak weather system will move through California with light precipitation expected statewide. Impacts will be minor.

Tuesday-Friday

- Drier once again with streams, creeks, and some mainstem rivers running high. No new weather or water hazards expected at this time.
